

About the course Django Create a Blog

Django is a high-level Python web framework that enables rapid development of secure and maintainable websites. Built by experienced developers, Django takes care of much of the hassle of web development, so you can focus on writing your app without needing to reinvent the wheel. Django is a framework, not a language. Python is the language in which Django is written. Django is a collection of Python libs allowing you to quickly and efficiently create a quality Web application, and is suitable for both frontend and backend. Good for Data Science and Analytics. As we know that Django is built on Python and Python is best known for Artificial Intelligence and Machine Learning. Therefore, if you want to integrate your project with Machine Learning or run any Data Science operation in it, then you should definitely go with Django. Django Framework is built with Python: Python is one of the most popular and growing languages in the world. Python is really easy to learn. It is usually first language of choice for developers. ... Many giants including Google use Python in their tech stack extensively.
